■ Random

`Random[ ]` gives a uniformly-distributed pseudorandom `Real` in the range 0 to 1.

`Random[`*type*`, `*range*`]` gives a pseudorandom number of the specified type, lying in the specified range. Possible types are: `Integer`, `Real` and `Complex`. The default range is 0 to 1. You can give the range `{`*min*`, `*max*`}` explicitly; a range specification of *max* is equivalent to `{0, `*max*`}`.

`Random[Integer]` gives 0 or 1 with probability $\frac{1}{2}$. ■ `Random[Complex, {`*zmin*`, `*zmax*`}]` gives a pseudorandom complex number in the rectangle defined by *zmin* and *zmax*. ■ `Random[Real, `*range*`, `*n*`]` generates a pseudorandom real number with a precision of *n* digits. ■ `Random` gives a different sequence of pseudorandom numbers whenever you run *Mathematica*. You can start `Random` with a particular seed using `SeedRandom`. ■ See page 343.
