■ Power

x^y gives x to the power y.

Mathematical function (see Section **??**). ■ Exact integer results are given when possible for roots of the form $n^{\frac{1}{m}}$. ■ For approximate complex numbers x and y, `Power` gives the principal value of $e^{y \log(x)}$. ■ For powers $x^{p/q}$ with exact rational exponents, real number results are given when possible. ■ Examples: `(-2.)^(1/3)` $\longrightarrow$ `-1.25992`; `(-2.)^(1./3)` $\longrightarrow$ `0.629961 + 1.09112 I`. ■ See page 25.
