■ Gamma

`Gamma[`z`]` is the Euler gamma function $\Gamma(z)$.

`Gamma[`z`, `a`]` is the incomplete gamma function $\Gamma(z, a)$.

`Gamma[`z`, `a_0`, `a_1`]` is the generalized incomplete gamma function $\Gamma(z, a_1) - \Gamma(z, a_0)$.

Mathematical function (see Section **??**). ■ The gamma function satisfies $\Gamma(z) = \int_0^\infty t^{z-1} e^{-t} dt$. ■ The incomplete gamma function satisfies $\Gamma(z, a) = \int_a^\infty t^{z-1} e^{-t} dt$. ■ See page 363. ■ See also: `Factorial`, `PolyGamma`.
