■ `IntegerQ`

`IntegerQ[`*expr*`]` gives `True` if *expr* is an integer, and `False` otherwise.

`IntegerQ[`*expr*`]` returns `False` unless *expr* is manifestly an integer (i.e. has head `Integer`). ■ You can use `IntegerQ[`*x*`] = True` to override the normal operation of `IntegerQ`, and effectively define *x* to be an integer. ■ See pages 230 and 326. ■ See also: `EvenQ`, `OddQ`, `NumberQ`, `TrueQ`.
