

■ 1.7.11 Grouping Together Elements of Lists

<code>Partition[list, n]</code>	partition <i>list</i> into <i>n</i> element pieces
<code>Partition[list, n, d]</code>	use offset <i>d</i> for successive pieces

Functions for grouping together elements of lists.

Here is a list.

```
In[1]:= t = {a, b, c, d, e, f, g}
Out[1]= {a, b, c, d, e, f, g}
```

This groups the elements of the list in pairs.

```
In[2]:= Partition[t, 2]
Out[2]= {{a, b}, {c, d}, {e, f}}
```

This groups elements in triples. There is no overlap between the triples.

```
In[3]:= Partition[t, 3]
Out[3]= {{a, b, c}, {d, e, f}}
```

This makes triples of elements, with each successive triple offset by just one element.

```
In[4]:= Partition[t, 3, 1]
Out[4]= {{a, b, c}, {b, c, d}, {c, d, e}, {d, e, f},
          {e, f, g}}
```

You can think of `Partition` as a kind of inverse to `Flatten`.
