

## ■ 1.7.6 Adding Elements to Lists

|                                        |                                                                  |
|----------------------------------------|------------------------------------------------------------------|
| <code>Prepend[list, element]</code>    | add <i>element</i> at the beginning of <i>list</i>               |
| <code>Append[list, element]</code>     | add <i>element</i> at the end of <i>list</i>                     |
| <code>Insert[list, element, n]</code>  | insert <i>element</i> at position <i>n</i> in <i>list</i>        |
| <code>Insert[list, element, -n]</code> | insert at position <i>n</i> counting from the end of <i>list</i> |

Functions for adding elements to lists.

This gives a list with **x** prepended.

```
In[1]:= Prepend[{a, b, c}, x]
```

```
Out[1]= {x, a, b, c}
```

This adds **x** at the end.

```
In[2]:= Append[{a, b, c}, x]
```

```
Out[2]= {a, b, c, x}
```

This inserts **x** so that it becomes element number 2.

```
In[3]:= Insert[{a, b, c}, x, 2]
```

```
Out[3]= {a, x, b, c}
```

Negative numbers count from the end of the list.

```
In[4]:= Insert[{a, b, c}, x, -2]
```

```
Out[4]= {a, b, x, c}
```
