

■ 1.8.11 Density Plots

If you have a display device that shows gray scales or color well, then a good alternative to contour plots are *density plots*. In a density plot, the height of the function at each point is shown by shading.

```
DensityPlot[f, {x, xmin, xmax}, {y, ymin, ymax}]
           make a density plot
```

Density plots.

This is a density plot. Lighter regions are higher.

```
In[1]:= DensityPlot[Sin[x] Sin[y], {x, -2, 2}, {y, -2, 2}]
```

You can get rid of the mesh like this. The results do not usually look as nice as they do when you include the mesh.

```
In[2]:= Show[%, Mesh -> False]
```
