

■ B.1.4 Aliases

Aliases may be defined for symbols.

alias ::= *symbol* specifies that when *alias* is entered, it is immediately converted to the symbol specification *symbol*.

Aliases that can be used in normal *Mathematica* input must have the same form as symbol names. Aliases apply independent of context. Aliases can be translated to symbols with any context specification.

Aliases may be defined for arbitrary strings, and will be used by ?.
