

■ B.1.7 Character Strings

Character strings are input in the form "cccc".

Newlines (line feeds and returns) and tabs within character strings are converted to spaces on input.

<code>\n</code>	newline (line feed)
<code>\t</code>	tab
<code>\nnn</code>	character with octal code <i>nnn</i>
<code>``</code> or <code>`n`</code>	a marker used by <code>StringForm</code>

Special codes used in strings.

Note that octal codes for characters depend on the character set (e.g. ASCII or EBCDIC) used in a particular implementation.
