

■ B.2 Input Syntax

■ B.2.1 Bracketed Objects

(expr)	parenthesization: grouping of input
$h[e_1, e_2, \dots]$	standard expression
$e[[i_1, i_2, \dots]]$	<code>Part</code> [$e, i_1, i_2, \dots$]
$\{e_1, e_2, \dots\}$	<code>List</code> [$e_1, e_2, \dots$]
$(* \text{ any text } *)$	comment

Bracketed objects.

$h[]$ is an expression with zero elements. $\{ \}$ is `List[ ]`.

Expressions like $f[e_1, , e_2]$, $\{e_1, , e_2\}$ and so on, are interpreted with the symbol `Null` inserted between each pair of adjacent commas.

Comments can be nested, and may continue for any number of lines.
