

■ B.4.3 Overriding Non-Standard Argument Evaluation

$$F[\text{expr}_1, \dots, \text{Release}[\text{expr}_n], \dots]$$

evaluates the argument expr_n , whether or not the attributes of F specify that it should be held

Overriding holding of arguments.

By using `Release`, you can get any argument of a function evaluated immediately, even if the argument would usually be evaluated later under the control of the function.
