

■ B.5.3 Types of Values

There are several different sets of transformation rules that can be associated with a particular symbol.

f	the value of f itself
$f[args]$ etc.	values of expressions associated with f
<code>Attributes[f]</code>	attributes of f
<code>Default[f]</code>	default values for arguments of f
<code>Format[f]</code> etc.	print forms associated with f
<code>Messages[f]</code>	messages associated with f
<code>N[f]</code> etc.	numerical values associated with f
<code>Options[f]</code>	defaults for options associated with f

Types of values associated with symbols.
