

■ B.5.4 Clearing and Removing Objects

<code>expr = .</code>	clear a value defined for <i>expr</i>
<code>f/: expr = .</code>	clear a value associated with <i>f</i> defined for <i>expr</i>
<code>Clear[s₁, s₂, ...]</code>	clear all values for the symbols <i>s_i</i> , except for attributes, messages and defaults
<code>ClearAll[s₁, s₂, ...]</code>	clear all values for the <i>s_i</i> , including attributes, messages and defaults
<code>Remove[s₁, s₂, ...]</code>	clear all values, and then remove the names of the <i>s_i</i>

Ways to clear and remove objects.

`Clear`, `ClearAll` and `Remove` can all take strings as arguments, to specify action on all symbols whose names match the strings given according to `StringMatchQ`.

`Clear`, `ClearAll` and `Remove` do nothing to symbols with the attribute `Protected`.
