

■ B.6.3 Interrupts

Most versions of *Mathematica* provide some mechanism for you to interrupt calculations that are running.

<code>abort</code>	abort this particular calculation
<code>continue</code>	continue the calculation
<code>exit</code>	exit <i>Mathematica</i> completely
<code>show</code>	show a trace of functions that <i>Mathematica</i> uses

Some typical options when you interrupt a calculation.

When you quit a calculation, the result you get will usually be the special symbol `$Interrupted`.
