

■ B.6.4 Initialization

<code>init.m</code> file to read when <i>Mathematica</i> starts

Conventional *Mathematica* initialization file.

The details of initialization and termination in *Mathematica* depend on various aspects of its external interface, as discussed in the next section.

Mathematica searches for the file `init.m` in the sequence of directories you have specified in the list `$Path`.

On many systems, you will need to read in a file which specifies what graphics output device you intend to use. Typically the name of the file you need will be the name of the device you intend to use.
