

■ Drop

`Drop[list, n]` gives *list* with its first *n* elements dropped.

`Drop[list, -n]` gives *list* with its last *n* elements dropped.

`Drop[list, {m, n}]` gives *list* with elements *m* through *n* dropped.

`Drop` uses the standard *sequence specification*. ■ Example: `Drop[{a,b,c,d,e}, 2] → {c, d, e}`.

■ `Drop[{a,b,c,d,e}, -3] → {a, b}`. ■ `Drop` can be used on any function, not necessarily `List`. ■ See page 99.

■ See also: `Rest`, `Take`, `Cases`.
