

■ Eigenvectors

`Eigenvectors[m]` gives a list of the eigenvectors of the square matrix m .

`Eigenvectors` finds numerical eigenvectors if m contains approximate real numbers. ■ Eigenvectors corresponding to degenerate eigenvalues are chosen to be linearly independent. ■ Eigenvectors are not normalized. ■ Only independent eigenvectors are given. ■ The number of eigenvectors for an $n \times n$ matrix may be less than n .

■ `Eigenvectors[m, ZeroTest -> test]` applies *test* to determine whether expressions should be assumed to be zero.

■ See page 452. ■ See also: `NullSpace`.
