

■ Eliminate

`Eliminate[eqns, vars]` eliminates variables between a set of simultaneous equations.

Equations are given in the form $lhs == rhs$. ■ Simultaneous equations can be combined either in a list or with `&&`. ■ A single variable or a list of variables can be specified. ■ Example:

`Eliminate[{x == 2 + y, y == z}, y]  $\longrightarrow$  z == -2 + x.` ■ Variables can be any expressions. ■ `Eliminate` works primarily with linear and polynomial equations. ■ Additional options to `Eliminate` can be specified, as in `MainSolve`.

■ See page 404. ■ See also: `Reduce`, `SolveAlways`, `Solve`, `MainSolve`, `AlgebraicRules`.
