

■ EllipticE

`EllipticE[phi, m]` gives the elliptic integral of the second kind $E(\phi|m)$.

`EllipticE[m]` gives the complete elliptic integral $E(m)$.

Mathematical function (see Section ??). ■ $E(\phi|m) = \int_0^\phi (1 - m \sin^2(\theta))^{\frac{1}{2}} d\theta$. ■ $E(m) = E(\frac{\pi}{2}|m)$. ■ See page ?? for a discussion of argument conventions for elliptic integrals. ■ See page 374.
