

■ FactorInteger

`FactorInteger[n]` gives a list of the prime factors of the integer n , together with their exponents.

Example: `FactorInteger[2434500]  $\longrightarrow$  {{2, 2}, {3, 2}, {5, 3}, {541, 1}}`. ■ For negative integers, `{-1, 1}` is included in the list of factors. ■ `FactorInteger[n, pmax]` factors only over primes up to size $pmax$. Any unfactored part of n is left as an element of the returned list. ■ `FactorInteger[n, FactorComplete->False]` finds only the first factor of n . ■ See page 346. ■ See also: `Prime`, `PrimeQ`, `Divisors`.
