

■ Fourier

`Fourier[list]` finds the Fourier transform of a list of complex numbers.

The Fourier transform b_s of a list a_r of length n is defined to be $\frac{1}{\sqrt{n}} \sum_{r=1}^n a_r e^{2\pi i(r-1)(s-1)/n}$. ■ Note that the zero frequency term appears at position 1 in the resulting list. ■ The list of data need not have a length equal to a power of two. ■ See page 465. ■ See also: `InverseFourier`, `Fit`.
