

■ HermiteH

`Hermite[n, x]` gives the Hermite polynomial $H_n(x)$.

Mathematical function (see Section ??). ■ Explicit polynomials are given for integer n . ■ The Hermite polynomials satisfy the differential equation $\frac{d^2 y}{dx^2} - 2x \frac{dy}{dx} + 2ny = 0$. ■ They are orthogonal polynomials with weight function e^{-x^2} . ■ See page 360.
