

■ Input

`Input [ ]` interactively reads in one *Mathematica* expression.

`Input ["prompt"]` requests input, using the specified string as a prompt.

`Input` returns the expression it read. ■ The operation of `Input` may vary from one computer system to another. When a *Mathematica* front end is used, `Input` may work through a dialog box. ■ When no front end is used, `Input` reads from standard input. ■ If the standard input is a file, then `Input` returns `EndOfFile` if you try to read past the end of the file.

■ On most systems, `Input [ ]` uses `?` as a prompt. ■ When `Input` is evaluated, *Mathematica* stops until the input has been read. ■ See page 300. ■ See also: `InputString`, `Read`, `Get`.
