

■ Insert

`Insert[list, elem, n]` inserts *elem* at position *n* in *list*. If *n* is negative, the position is counted from the end.

Example: `Insert[{a, b, c}, x, 2] → {a, x, b, c}`. ■ *list* can have any head, not necessarily `List`. ■ See page 102. ■ See also: `Prepend`, `Append`.
