

■ InverseJacobiSN

`InverseJacobiSN` $[v, m]$, `InverseJacobiCN` $[v, m]$, etc. give the inverse Jacobi elliptic functions $\text{sn}^{-1}(v|m)$ etc.

There are a total of twelve functions, with the names of the form `InverseJacobiPQ`, where P and Q can be any distinct pair of the letters S, C, D and N.

Mathematical functions (see Section ??). ■ $\text{sn}^{-1}(v|m)$ gives the value of u for which $v = \text{sn}(u|m)$. ■ The inverse Jacobi elliptic functions are related to elliptic integrals. ■ See page 374.
