

■ JacobiSN

`JacobiSN[u, m]`, `JacobiCN[u, m]`, etc. give the Jacobi elliptic functions $\text{sn}(u|m)$ etc.

There are a total of twelve functions, with the names of the form `JacobiPQ`, where *P* and *Q* can be any distinct pair of the letters S, C, D and N.

Mathematical functions (see Section ??). ■ $\text{sn}(u) = \sin(\phi)$, $\text{cn}(u) = \cos(\phi)$ and $\text{dn}(u) = \sqrt{1 - m \sin^2(\phi)}$, where $\phi = \text{am}(u|m)$. ■ Other Jacobi elliptic functions can be found from the relation $\text{pq}(u) = \text{pr}(u)/\text{qr}(u)$, where for these purposes $\text{pp}(u) = 1$. ■ See page 374. ■ See also: `InverseJacobiSN`.
