

■ LaguerreL

`LaguerreL[n, a, x]` gives the Laguerre polynomial $L_n^a(x)$.

Mathematical function (see Section ??). ■ Explicit polynomials are given when possible. ■ The Laguerre polynomials are orthogonal with weight function $x^a e^{-x}$. ■ They satisfy the differential equation $x \frac{d^2 y}{dx^2} + (a + 1 - x) \frac{dy}{dx} + ny = 0$. ■ See page 360.
