

■ MatrixQ

`MatrixQ[expr]` gives `True` if *expr* is a list of lists that can represent a matrix, and gives `False` otherwise.

`MatrixQ[expr]` gives `True` only if *expr* is a list, and each of its elements are lists of equal length, containing no elements that are themselves lists. ■ See pages 230 and 440. ■ See also: `VectorQ`, `TensorRank`.
