

■ OutputForm

`OutputForm[expr]` prints as the standard *Mathematica* output form for *expr*.

`OutputForm` imitates standard two-dimensional mathematical notation. ■ The `OutputForm` of many kinds of expressions is quite different from their internal representation. ■ In some versions of *Mathematica* with advanced graphical interfaces, you will be able to select parts of `OutputForm` expressions graphically. ■ See page 268. ■ See also: `InputForm`, `TeXForm`, `Short`, `FullForm`.
