

## ■ AxesLabel

`AxesLabel` is an option for graphics functions that specifies labels for axes.

`AxesLabel` -> `None` specifies that no labels should be given. ■ `AxesLabel` -> *label* specifies a label for the *y* of a two-dimensional plot, or the *z* axis of a three-dimensional plot. ■ `AxesLabel` -> *{xlabel, ylabel}* specifies labels for different axes. ■ Any expression can be specified as a label. It will be given in `OutputForm`. Arbitrary strings of text can be enclosed in ". ■ See page 109. ■ See also: `PlotLabel`.
