

■ Partition

`Partition[list, n]` partitions *list* into non-overlapping sublists of length *n*.

`Partition[list, n, di]` generates sublists with offset *di*.

Example: `Partition[{a,b,c,d,e,f}, 2] → {{a, b}, {c, d}, {e, f}}`. ■ All the sublists generated by `Partition[list, n, di]` are of length *n*. As a result, some elements at the end of *list* may not appear in any sublist. ■ The element *e* in `Partition[{a,b,c,d,e}, 2] → {{a, b}, {c, d}}` is dropped.

■ `Partition[{a,b,c,d,e}, 3, 1] → {{a, b, c}, {b, c, d}, {c, d, e}}` generates sublists with offset 1.

■ The object *list* need not have head `List`. ■ `Partition[f[a,b,c,d], 2] → f[f[a, b], f[c, d]]`. ■ See page 105. ■ See also: `Flatten`.
