

■ PlotStyle

`PlotStyle` is an option for `Plot` and `ListPlot` that specifies the style of lines or points to be plotted.

`PlotStyle -> prim` specifies that all lines or points are to be generated with the specified graphics primitive, or list of graphics primitives. ■ `PlotStyle -> {style1, style2, ...}` specifies that successive lines generated should use graphics primitives `style1, ...`. Each `stylei` must always be a *list* of graphics primitives, perhaps of length one. The list of `stylei` is used cyclically. ■ Graphics primitives such as `RGBColor`, `Dashing`, `GrayLevel`, `Thickness` and `PointSize` can be used. ■ See pages 109 and 147. ■ See also: `Graphics`.
