

■ Positive

`Positive[x]` gives `True` if x is a positive number.

`Positive[x]` gives `False` if x is manifestly a negative number, or zero. Otherwise, it remains unevaluated. ■ A definition like `Positive[x] = True` effectively specifies that x is a positive number. ■ Definitions for `Sign` are tested in determining whether linear combinations of expressions are positive. ■ See page 242. ■ See also: `Negative`, `NonNegative`, `Sign`.
