

■ PrependTo

`PrependTo[s, elem]` prepends *elem* to the value of *s*, and resets *s* to the result.

`PrependTo[s, elem]` is equivalent to `s = Prepend[s, elem]`. ■ `PrependTo[s, elem]` does not evaluate *s*. ■ You can use `PrependTo` repeatedly to build up a list. ■ See page 257. ■ See also: `AppendTo`.
