

■ Rational

`Rational` is the head used for rational numbers.

You can enter a rational number in the form n/m . ■ The pattern object `_Rational` can be used to stand for a rational number. It cannot stand for a single integer. ■ You have to use `Numerator` and `Denominator` to extract parts of `Complex` numbers. ■ See page 325. ■ See also: `Integer`, `Numerator`, `Denominator`.
