

■ Rectangle

`Rectangle[{xmin, ymin}, {xmax, ymax}]` is a two-dimensional graphics primitive that represents a filled rectangle, oriented parallel to the axes.

`Rectangle[{Scaled[{xmin, ymin}], Scaled[{xmax, ymax}]}]` can also be used. ■ `Rectangle` is equivalent to a suitable `Polygon` with four corners. ■ You can use the graphics primitives `GrayLevel` and `RGBColor` to specify how rectangles should be filled. ■ See page 142. ■ See also: `Polygon`, `CellArray`.
