

■ ReplaceRepeated

expr //. *rules* repeatedly performs replacements until *expr* no longer changes.

expr //. *rules* effectively applies /. repeatedly, until the results it gets no longer change. ■ It performs one complete pass over the expression using /. , then carries out the next pass. ■ You should be very careful to avoid infinite loops when you use the //. operator. $x \text{ //. } x \rightarrow x + 1$ will, for example, lead to an infinite loop. ■ See page 208. ■ See also: Rule, Set, FixedPoint.
