

■ RotateLeft

`RotateLeft[expr, n]` cycles the elements in *expr* *n* positions to the left.

`RotateLeft[expr]` cycles one position to the left.

Example: `RotateLeft[{a, b, c}, 1] → {b, c, a}`. ■ `RotateLeft[expr, -n]` rotates *n* positions to the right.

■ See page 103. ■ See also: `Reverse`.
