

■ RowReduce

`RowReduce[m]` gives the row-reduced form of the matrix m .

`RowReduce` adds multiples of rows together, producing zero elements when possible. The final matrix is in reduced row echelon form. ■ `RowReduce` works on both numerical and symbolic matrices. ■ `RowReduce[m, ZeroTest -> test]` evaluates `test[m[[i, j]]]` to determine whether matrix elements are zero. The default setting is `ZeroTest -> (# == 0) &`. ■ See page 448. ■ See also: `NullSpace`, `LatticeReduce`.
