

■ Rule

lhs -> *rhs* represents a rule that transforms *lhs* to *rhs*.

lhs -> *rhs* evaluates *rhs* immediately. ■ You can apply rules using `Replace`. ■ The assignment *lhs* = *rhs* specifies that the rule *lhs* -> *rhs* should be used whenever it applies. ■ When you enter a rule like *lhs* -> *rhs* or `Rule[lhs, rhs]`, *Mathematica* inserts a “compiled” form of the rule as a third, hidden, element. ■ See page 576. ■ See also: `Replace`, `Set`, `AlgebraicRules`.
