

■ Select

`Select` [*list*, *crit*] picks out elements e_i of *list* for which *crit* [e_i] is `True`.

Example: `Select[{1,4,2,7,6}, EvenQ]  $\longrightarrow$  {4, 2, 6}`. ■ The object *list* can have any head, not necessarily `List`.

■ See pages 172 and 235. ■ See also: `Cases`, `Take`, `Drop`.
