

■ Binomial

`Binomial`[n , m] gives the binomial coefficient $\binom{n}{m}$.

Integer mathematical function (see Section ??). ■ `Binomial` is evaluated whenever n and m differ by an integer.

■ Example: `Binomial`[$x+2$, x] $\longrightarrow \frac{(1+x)(2+x)}{2}$. ■ See page 350. ■ See also: `Multinomial`, `Pochhammer`.
