

■ SetOptions

`SetOptions[s, name1->value1, name2->value2, ...]` sets the specified default options for a symbol `s`.

`SetOptions` is equivalent to an assignment which redefines certain elements of the list `Options[s]` of default options.

■ `SetOptions` can be used on `Protected` symbols. ■ `SetOptions` returns the new form of `Options[s]`. ■ See pages 113 and 564.
