

■ SlotSequence

`##` represents the sequence of arguments supplied to a pure function.

`##n` represents the sequence of arguments supplied to a pure function, starting with the *n*th argument.

`##` is used to represent sequences of arguments in pure functions of the form *body*& or `Function[body]`. ■ `##` is equivalent to `SlotSequence[ ]` or `SlotSequence[1]`. ■ `##n` is equivalent to `SlotSequence[n]`. *n* must be a positive integer. ■ A sequence of arguments supplied to a pure function is “spliced” into the body of the function wherever `##` and so on appear.

■ See page 181.
