

■ Take

`Take[list, n]` gives the first n elements of *list*.

`Take[list, -n]` gives the last n elements of *list*.

`Take[list, {m, n}]` elements m through n of *list*.

Take uses the standard *sequence specification*. ■ Example: `Take[{a,b,c,d,e}, 3]  $\longrightarrow$  {a, b, c}`.

■ `Take[{a,b,c,d,e}, -2]  $\longrightarrow$  {d, e}`. ■ Take can be used on an object with any head, not necessarily List. ■ See page 99. ■ See also: Part, Drop, Cases.
