

■ TimeConstrained

`TimeConstrained[expr, t]` evaluates *expr*, stopping after *t* seconds.

`TimeConstrained` generates an interrupt to stop the evaluation of *expr* if the evaluation is not completed within the specified time. ■ `TimeConstrained` returns `$Interrupted` if the evaluation is interrupted. ■ `TimeConstrained` has attribute `HoldFirst`. ■ See page 321. ■ See also: `MemoryConstrained`, `Timing`, `$RecursionLimit`.
