

■ `$IgnoreEOF`

`$IgnoreEOF` specifies whether *Mathematica* should terminate when it receives an end-of-file character as input.

`$IgnoreEOF` defaults to `False`. ■ `$IgnoreEOF` is assumed to be `False` if the input to *Mathematica* comes from a file, rather than an interactive device. ■ See pages 577 and 580. ■ See also: `Exit`, `Quit`.
