

■ Clear

`Clear[symbol1, symbol2, ...]` clears values defined for the *symbol_i*.

`Clear["form1", "form2", ...]` clears values for all symbols whose names textually match any of the *form_i*.

Clear does not clear attributes, messages, or defaults associated with symbols. ■ `Clear["form"]` allows metacharacters such as `*`, as specified in the notes on `StringMatchQ`. ■ `Clear["context`*"]` clears all symbols in a particular context.

■ Clear is `HoldAll`. ■ Clear does not affect symbols with the attribute `Protected`. ■ See pages 87, 188 and 575. ■ See also: `Remove`.
