

■ Collect

`Collect[expr, x]` collects together terms involving the same power of x .

`Collect[expr, {x1, x2, ...}]` collects together terms that involve the same powers of $x_1, x_2, \dots$

`Collect[expr, x]` effectively writes *expr* as a polynomial in x . ■ Examples:

`Collect[x + n x + m, x] → m + x (1 + n);`

`Collect[Expand[(1+x+y)^3], x] → 1 + x3 + 3 y + 3 y2 + y3 + x2 (3 + 3 y) + x (3 + 6 y + 3 y2).`

■ The “variables” x_i can themselves be products. ■ See page 381. ■ See also: `Series`, `CoefficientList`, `Together`.
