

### ■ 1.7.7 Combining Lists

|                                       |                                                                   |
|---------------------------------------|-------------------------------------------------------------------|
| <code>Join[list1, list2, ...]</code>  | concatenate lists together                                        |
| <code>Union[list1, list2, ...]</code> | combine lists, removing repeated elements, and sorting the result |

#### Functions for combining lists.

`Join` concatenates any number of lists together.

```
In[1]:= Join[{a, b, c}, {x, y}, {c, {d, e}, a}]
Out[1]= {a, b, c, x, y, c, {d, e}, a}
```

`Union` combines lists, keeping only distinct elements.

```
In[2]:= Union[{a, b, c}, {c, a, d}, {a, d}]
Out[2]= {a, b, c, d}
```
